# db●Minimizer

SMALLER SNAPSHOT SIGNATURE TEST ENVIRONMENT

Maintain your test databases without hassles. dbMinimizer allows for customized selection of data directly from your database to a fully functional smaller database. dbMinimizer helps you eliminate the struggles of maintaining your test databases.

dbMinimizer is your solution to expedite and streamline system testing with cost savings results.

- Data selection can be defined based on a specific branch, product type, balance range, or even a customized list of accounts.

- Provides a preview list of accounts to be extracted within minutes not hours.

- Interrogates the database for all related accounts within your selection criteria to provide full functionality without manual intervention.

- Supply minimal information upon definition of the extract criteria to obtain a fully functional database ready for testing.

- Automatically sets library lists, subsystems and users. All the complexity of creating a test database is managed by dbMinimizer.

- Flexibility to easily add your modification files to the process.

- Have a fully functional test database within just a couple of hours!

- Automatically saves database extract criteria for re-use.
